

# WEEKLY ETF REVIEW

Thursday, 28 May 2026

Investor Report

This report is for informational and educational purposes only; please see the disclaimer at the end.

## PRIMARY REGIME

**Risk-on growth (66% confidence)**

## GEOPOLITICAL REGIME

**Mixed / not yet decisive**

## MAIN TAKEAWAY

**SMH remains the earned leader, but fresh capital and replacement decisions must pass regime, pricing and duel-evidence checks.**

2

## PORTFOLIO ACTION SNAPSHOT

| Recommendation            | Tickers / notes                                                  |
|---------------------------|------------------------------------------------------------------|
| Add / destination         | <a href="#">GSG</a>                                              |
| Hold                      | <a href="#">SMH</a> , <a href="#">URNM</a>                       |
| Hold with override        | <a href="#">PPA</a> , <a href="#">PAVE</a> , <a href="#">SPY</a> |
| Proposed replace / reduce | <a href="#">GLD</a> → <a href="#">GSG</a>                        |
| Close                     | None                                                             |

## ROTATION ENGINE STATUS

- Rotation plan artifact is active; target weights and trade intents are proposed until the trade ledger and portfolio state record execution.

#### BEST REPLACEMENTS TO FUND

- reduce [GLD](#) by -5.00% NAV and allocate 5.00% NAV to [GSG](#), pending execution and portfolio-state persistence.

3

#### REGIME DASHBOARD

##### Regime snapshot

- **Current regime:** Risk-on growth
- **Confidence:** 66%
- **Decision rule:** Macro supports selection discipline, not broad risk expansion by default.

##### What changed

- AI / semiconductor leadership remains the dominant equity impulse.
- Gold hedge behavior remains under review rather than automatic ballast.

##### Portfolio implications

- Risk appetite is supportive, but fresh adds still need position-size room and pricing confirmation.
- Growth and infrastructure lanes can be considered if they do not worsen concentration.
- Defensive hedges should be reviewed for opportunity cost.

##### Cross-asset confirmation

- Semiconductor leadership supports [SMH](#), but [SPY](#) overlap must remain explicit.
- Small-cap and duration signals are not strong enough to justify broad beta expansion.
- Gold is treated as a hedge review item unless price behavior improves.

## Policy catalysts transferred to the report

- **AI infrastructure and semiconductor supply chains:** Capital spending and strategic supply-chain policy continue to support semiconductor and infrastructure lanes. Affected lanes: AI compute infrastructure, Grid buildout / electrification.
- **Defense and sovereign resilience:** Defense-budget durability remains a structural support, but ETF vehicle choice still matters. Affected lanes: Defense innovation / sovereign resilience.

### 4

## STRUCTURAL OPPORTUNITY RADAR

| Theme                                      | Primary ETF          | Alternative ETF      | Why it matters                                                                                                                                                                                                                                         | Structural fit | Macro timing | Status                   | What needs to happen                                                                              | Time horizon |
|--------------------------------------------|----------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|--------------|--------------------------|---------------------------------------------------------------------------------------------------|--------------|
| AI compute infrastructure                  | <a href="#">SMH</a>  | <a href="#">SOXX</a> | Semiconductor and AI capex remains the cleanest funded structural growth lane. Macro filter: Regime and price leadership still support AI compute exposure, but concentration discipline applies.                                                      | 5              | 5            | Actionable now           | AI infrastructure leadership remains persistent, but position-size discipline matters.            | 3-12 months  |
| Cybersecurity resilience                   | <a href="#">CIBR</a> | <a href="#">BUG</a>  | Cyber spend is linked to AI, cloud, data-center and geopolitical resilience.                                                                                                                                                                           | 4              | 4            | Actionable now           | Offers digital-infrastructure exposure with less direct semiconductor cyclicalty.                 | 3-12 months  |
| Grid buildout / electrification            | <a href="#">PAVE</a> | <a href="#">GRID</a> | Power demand, grid bottlenecks and reshoring capex support infrastructure spend. Macro filter: AI power demand and infrastructure policy support the grid lane; funding still depends on <a href="#">PAVE</a> -vs- <a href="#">GRID</a> duel evidence. | 5              | 4            | Actionable now           | <a href="#">PAVE</a> remains useful, but <a href="#">GRID</a> is the cleaner thematic challenger. | 3-12 months  |
| Industrial automation and factory software | <a href="#">ROBO</a> | <a href="#">IRBO</a> | Automation capex can broaden beyond semiconductors into industrial productivity.                                                                                                                                                                       | 4              | 3            | Watchlist / under review | Needs clearer industrial order momentum.                                                          | 3-12 months  |
| Broad commodity inflation hedge            | <a href="#">GSG</a>  | <a href="#">DBC</a>  | Broad commodities may hedge inflation better than single-metal or single-gold exposure.                                                                                                                                                                | 3              | 3            | Watchlist / under review | Useful only if commodity breadth confirms.                                                        | 3-12 months  |
| Biotech innovation / therapeutic platforms | <a href="#">XBI</a>  | <a href="#">IBB</a>  | Biotech remains a long-duration innovation lane but needs risk appetite.                                                                                                                                                                               | 4              | 3            | Watchlist / under review | Can become attractive if breadth improves and rates ease.                                         | 3-12 months  |

## Best structural opportunities not yet actionable

- Food security / agriculture inputs
- Water infrastructure / treatment
- Critical minerals / copper / refining

## Notable lanes assessed but not promoted this week

| Theme                                     | Primary ETF          | Why not promoted                                                                | What would change that                                                                              |
|-------------------------------------------|----------------------|---------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Defense innovation / sovereign resilience | <a href="#">PPA</a>  | Scored below the live radar cutoff versus stronger funded and challenger lanes. | The lane remains relevant, but <a href="#">PPA</a> must justify itself versus <a href="#">ITA</a> . |
| Copper and electrification materials      | <a href="#">COPX</a> | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Becomes more fundable if copper momentum and China demand confirm.                                  |
| Nuclear utilities and clean baseload      | <a href="#">NLR</a>  | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Can diversify <a href="#">URNM</a> if fuel-cycle volatility is too high.                            |
| Robotics / automation                     | <a href="#">BOTZ</a> | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Needs industrial capex breadth and ETF momentum.                                                    |
| Non-U.S. developed market diversification | <a href="#">IEFA</a> | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Becomes fundable if U.S. factor concentration rises or non-U.S. breadth improves.                   |

## 4A. Short Opportunity Radar

| Short theme                 | Candidate ETF        | Short thesis                                             | Trigger                                                                       | Invalidation                                    | Time horizon | Confidence |
|-----------------------------|----------------------|----------------------------------------------------------|-------------------------------------------------------------------------------|-------------------------------------------------|--------------|------------|
| Rate-sensitive small caps   | <a href="#">IWM</a>  | Restrictive real rates pressure weaker balance sheets.   | <a href="#">IWM</a> breaks down versus <a href="#">SPY</a> while yields firm. | Clear easing impulse and better credit breadth. | 1-3 months   | Medium     |
| China platform beta         | <a href="#">KWEB</a> | Policy confidence remains fragile.                       | Failed rally or renewed FX/policy stress.                                     | Durable stimulus and earnings recovery.         | 1-3 months   | Medium     |
| Long-duration bonds         | <a href="#">TLT</a>  | Sticky inflation and real-rate risk remain headwinds.    | Real yields rise again.                                                       | Growth scare and decisive lower-yield breakout. | 1-3 months   | Medium     |
| Speculative clean-tech beta | <a href="#">ICLN</a> | Financing pressure and weak profitability remain issues. | Failure to recover in broad risk-on tape.                                     | Sharp rate relief or major policy surprise.     | 3-12 months  | Medium     |

5

## KEY RISKS / INVALIDATORS

- [SPY](#) plus [SMH](#) creates high U.S. tech / AI factor overlap.
- Hedge and defensive sleeves must justify their capital allocation through role validity, pricing and relative-strength evidence.
- [PPA](#) and [PAVE](#) remain replaceable until their ETF implementation quality is proven.
- Non-U.S. equity exposure remains a diversification gap.

6

## BOTTOM LINE

- **Portfolio stance:** Risk appetite is supportive, but fresh adds still need position-size room and pricing confirmation.
- **Best earned exposure:** [SMH](#) remains the portfolio's strongest contributor and cleanest secular growth expression.
- **Main discipline issue:** Growth and infrastructure lanes can be considered if they do not worsen concentration.
- **Weakest implementation questions:** [PPA](#) must prove itself against [ITA](#), [PAVE](#) must prove itself against [GRID](#), and [GLD](#) must prove that it still behaves like useful ballast.
- **Action bias:** Defensive hedges should be reviewed for opportunity cost.

7

## EQUITY CURVE AND PORTFOLIO DEVELOPMENT

- Starting capital (EUR): 100000.00
- Current portfolio value (EUR): 110032.93
- Since inception return (%): 10.03

- Equity-curve state: Reconciled to Section 15 with full valuation history
- EUR/USD used: 1.1650
- Notes: Section 7 uses the validated valuation history plus the current portfolio NAV; Section 15 is rendered from the same reconciled portfolio state.

| Date       | Portfolio value (EUR) | Comment                                                                           |
|------------|-----------------------|-----------------------------------------------------------------------------------|
| 2026-03-28 | 100000.00             | Inaugural model portfolio established                                             |
| 2026-04-16 | 100671.75             | Fresh per-ticker repricing using latest completed close set                       |
| 2026-04-20 | 102026.08             | Fresh six-of-six repricing using completed 20 April close set                     |
| 2026-04-24 | 104477.54             | Fresh five-of-six repricing; <a href="#">PPA</a> carried forward                  |
| 2026-04-29 | 101854.68             | Fresh six-of-six repricing using persisted 2026-04-29 audit                       |
| 2026-05-04 | 102636.85             | Fresh five-of-six pricing recovery; <a href="#">GLD</a> carried forward           |
| 2026-05-05 | 103536.96             | Latest 4 May close basis; +8 <a href="#">SMH</a> executed from cash               |
| 2026-05-27 | 109387.17             | Runtime valuation from immutable pricing audit and explicit portfolio state       |
| 2026-05-28 | 110032.93             | Latest portfolio valuation based on confirmed closing prices and current holdings |

## Closing prices used in this report

The portfolio valuation above is based on the per-position closes shown here. Requested close date: **2026-05-28**. The source column shows the market-data layer that supplied the close, not internal resolver names.

| Holding              | Requested close | Close date used | Close used | Currency | Market-data source | Status                        |
|----------------------|-----------------|-----------------|------------|----------|--------------------|-------------------------------|
| <a href="#">SPY</a>  | 2026-05-28      | 2026-05-28      | 754.60     | USD      | Twelve Data        | Fresh exact close, unverified |
| <a href="#">SMH</a>  | 2026-05-28      | 2026-05-28      | 599.83     | USD      | Twelve Data        | Fresh exact close, unverified |

7A. ETF Position Performance

Performance is calculated on the current ETF holdings using the latest validated close-price audit and available market-history inputs.

| Portfolio sleeve | Investment thesis                     | Tradable ETF        | Weight % | 1w return | 1m return | 3m return | Since-entry | P/L EUR  | Contribution % |
|------------------|---------------------------------------|---------------------|----------|-----------|-----------|-----------|-------------|----------|----------------|
| Core beta        | Core U.S. large-cap exposure          | <a href="#">SPY</a> | 24.14%   | +1.82%    | +6.28%    | +10.54%   | +6.17%      | 2,754.54 | +2.75%         |
| Growth engine    | AI compute / semiconductor leadership | <a href="#">SMH</a> | 27.61%   | +6.55%    | +21.12%   | +48.90%   | +20.61%     | 9,100.61 | +9.10%         |
| Resilience       | Defense and sovereign resilience      | <a href="#">PPA</a> | 15.28%   | +4.98%    | +7.81%    | -2.61%    | -6.97%      | 7.55     | +0.01%         |

| Portfolio sleeve | Investment thesis                           | Tradable ETF         | Weight % | 1w return | 1m return | 3m return | Since-entry | P/L EUR   | Contribution % |
|------------------|---------------------------------------------|----------------------|----------|-----------|-----------|-----------|-------------|-----------|----------------|
| Real-asset capex | Grid and infrastructure capex               | <a href="#">PAVE</a> | 13.70%   | +3.76%    | +2.65%    | +2.72%    | +8.25%      | 1,193.27  | +1.19%         |
| Strategic energy | Nuclear and uranium cycle exposure          | <a href="#">URNM</a> | 8.18%    | +4.33%    | -5.92%    | -15.77%   | -0.55%      | -902.70   | -0.90%         |
| Hedge ballast    | Hard-asset geopolitical and inflation hedge | <a href="#">GLD</a>  | 9.34%    | -0.37%    | -0.47%    | -14.12%   | -11.14%     | -1,579.93 | -1.58%         |

# WEEKLY ETF REVIEW

Thursday, 28 May 2026

Analyst Report

1

## ASSET ALLOCATION MAP

| Bucket                | Stance      | Reason                                                           |
|-----------------------|-------------|------------------------------------------------------------------|
| US equities           | Neutral     | Investable but concentration risk is explicit.                   |
| Europe equities       | Neutral     | Watchlist only; non-U.S. exposure remains a diversification gap. |
| EM equities           | Underweight | USD and oil sensitivity remain headwinds.                        |
| large cap             | Neutral     | Quality leadership still works.                                  |
| small cap             | Underweight | Rates and refinancing remain difficult.                          |
| growth                | Neutral     | Selective growth led by <a href="#">SMH</a> remains attractive.  |
| quality               | Overweight  | Earnings durability remains valuable.                            |
| gold                  | Neutral     | Hedge role under review.                                         |
| industrials / defense | Overweight  | Structural thesis valid; vehicle under review.                   |

| Bucket         | Stance    | Reason                                                  |
|----------------|-----------|---------------------------------------------------------|
| non-USD assets | Watchlist | Zero allocation is an explicit U.S. exceptionalism bet. |

### BEST NEW OPPORTUNITIES

- [SMH](#) remains the leading funded growth exposure, subject to the max-position rule.
- Proposed rotation: reduce [GLD](#) by 5.00% NAV and allocate 5.00% NAV to [GSG](#), pending execution and portfolio-state persistence.
- [CIBR](#) / [BUG](#): Cyber spend is linked to AI, cloud, data-center and geopolitical resilience.
- [ROBO](#) / [IRBO](#): Automation capex can broaden beyond semiconductors into industrial productivity.
- [GSG](#) / [DBC](#): Broad commodities may hedge inflation better than single-metal or single-gold exposure.
- Replacement candidates remain evidence-gated: pricing basis and duel status must be visible before funding.

Recommendation discipline continuity

- Rotation plan: active.
- Replacement challengers: not fundable without completed duel.

Constraints

- Max position size: 25%
- Max number of positions: 8
- UCITS only: No

- Leverage ETFs allowed: No
- Drawdown tolerance: Moderate
- Income vs growth preference: Balanced growth with resilience bias

## Changes since last review

- Added: a validated state-led production path with macro-policy and rotation-plan inputs; no portfolio position was executed unless recorded in the trade ledger.
- Proposed rotation: reduce [GLD](#) by 5.00% NAV and allocate 5.00% NAV to [GSG](#), pending execution and portfolio-state persistence.
- Executed reductions/closures: none unless separately recorded in the trade ledger and persisted portfolio state.
- Thesis changes: No structural thesis was abandoned; implementation, macro-regime and rotation discipline are materially tighter.
