

2026-08-10

This report is for informational and educational purposes only. UCITS identity, trading line and product policy remain authoritative; see the disclaimer at the end.

PRIMARY REGIME

Risk-on growth

PORTFOLIO ACTION

4 model positions active

MAIN CONCLUSION

Protected model portfolio: L0CK, VWCE, EUNA and SXR8; every change requires current re-underwriting and a separate allocation decision.

1 DECISION COCKPIT

- This run: no portfolio change is authorised; 4 protected model positions are active — 934 L0CK, 151 VWCE, 1,526 EUNA and 10 SXR8.
- Most mature implementation: 0 verified UCITS trading lines.
- Main blocker: 13 lines are not yet fully verified or priced.
- Next action: complete current re-underwriting and change nothing without fresh exact-line pricing and a separate allocation decision.

Decision rule: Re-underwrite L0CK, VWCE, EUNA and SXR8; assess challengers through the donor → UCITS → pricing → fundability chain.

2 PORTFOLIO AND CAPITAL

Component	Value
Starting capital	€ 100,000.00
Cash	€ 50,208.40
Invested market value	€ 49,548.36
Total portfolio value	€ 99,756.76
Return since inception	-0.24%
Funded positions	4

The model portfolio has € 49,548.36 invested and € 50,208.40 in cash; no real broker execution.

3 REGIME AND POLICY DASHBOARD

Macro pack is sufficiently current.

Component	Reading	Implication
Regime	Risk-on growth	Descriptive macro context; no allocation authority.
Federal Reserve	Restrictive / data-dependent	Maintain quality and cash discipline; any allocation still requires a verified UCITS instrument, current pricing, re-underwriting and a separate capital decision.
ECB	On hold after June tightening / data-dependent	European equity or bond exposure remains conditional on UCITS identity, exact-line verification, current pricing, re-underwriting and a separate capital decision.

- No material regime change was recorded versus the prior review; the Risk-on growth backdrop remained intact, market breadth is mixed, and cross-asset confirmation is mixed.

4 STRUCTURAL UCITS OPPORTUNITY RADAR

Scores show relevance and implementation maturity, not allocation authority.

Theme	UCITS lines	Reference	Relevance	S	I	Status	Next confirmation	Horizon
Core U.S. equity through UCITS	CSPX, SXR8	SPY · re-search only	Broad U.S. earnings exposure and liquidity make this the most mature implementation lane.	5	3	Active model position	Monitor role, contribution, overlap and current re-underwriting; no change without fresh evidence and a separate allocation decision.	3–12 months
Global equity	VWCE, IWDA	VT · research only	Broad global diversification reduces dependence on one region or factor.	4	3	Active model position	Monitor role, contribution, overlap and current re-underwriting; no change without fresh evidence and a separate allocation decision.	3–12 months
Emerging-market equity	EMIM	EEM · re-search only	Additional growth and valuation diversification, with higher currency and policy risk.	3	1	Research only, not priced	Complete registry and pricing coverage before comparison is decision-useful.	6–18 months
Technology and semiconductors	CNDX	QQQ / SMH · research only	AI infrastructure and compute remain structural growth drivers, but concentration risk is high.	5	3	Watchlist, verification required	Complete identity, KID, trading-line and source-agreement checks.	3–12 months
Global aggregate bonds	EUNA	AGG · re-search only	May later add stability and duration diversification once trading lines and pricing are confirmed.	3	3	Active model position	Monitor role, contribution, overlap and current re-underwriting; no change without fresh evidence and a separate allocation decision.	3–12 months
Infrastructure and electrification	INFR	PAVE / GRID · research only	Grid investment, data centres and electrification support the structural case.	4	1	Research only, not priced	Complete registry and pricing coverage before comparison is decision-useful.	6–18 months
Gold and hard assets	SGLN	GLD · re-search only	Diversification potential exists, but the European ETC structure requires an explicit policy decision.	2	1	Policy blocked	Decide explicitly whether ETC structures are permitted by product policy.	6–18 months

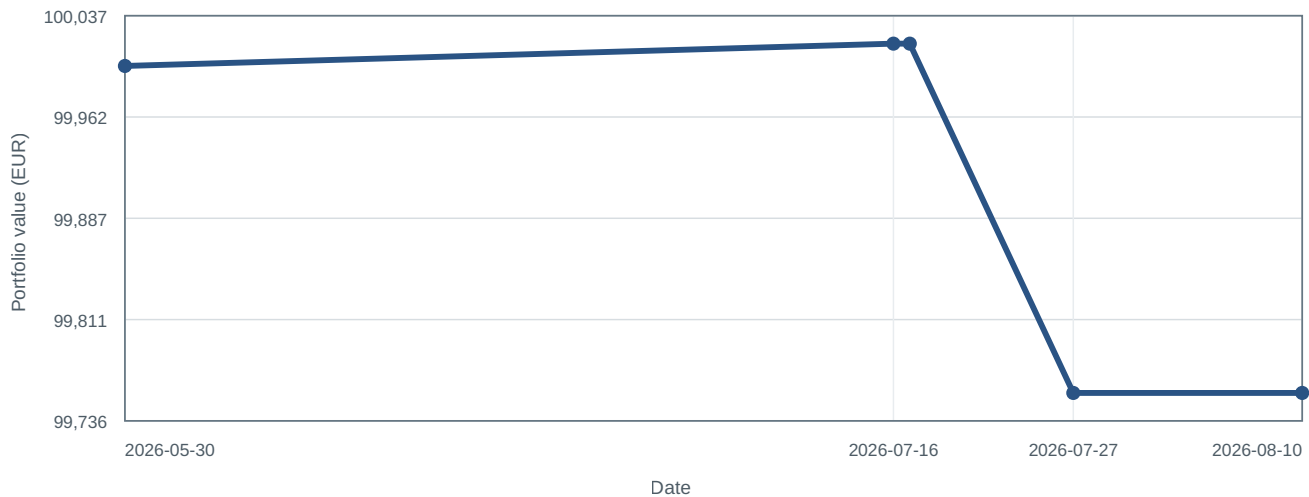

5 KEY RISKS AND INVALIDATIONS

Active risk	Resolution / invalidation
Price observations are not yet valuation-grade.	Promote only after source agreement and pricing lineage are sufficiently strong.
13 trading lines still require full verification.	No funding before identity, KID, trading line and broker availability are confirmed.
0 line has no usable price in this run.	Keep unresolved lines outside comparison and allocation.
Technology candidates may create overly narrow factor exposure.	Cap satellite weight and always compare with broad core exposure.

Active risk	Resolution / invalidation
Gold exposure often uses ETC structures outside the current policy.	No inclusion without an explicit product-policy decision.

6 PORTFOLIO DEVELOPMENT

Portfolio curve (EUR)

Date	Portfolio value	Cash	Invested	Comment
2026-05-30	€ 100,000.00	€ 100,000.00	€ 0.00	Initial cash-only EU/UCITS bootstrap state
2026-07-16	€ 100,016.60	€ 60,439.44	€ 39,577.16	Three-position funded-aware non-delivery preview
2026-07-17	€ 100,016.60	€ 60,439.44	€ 39,577.16	Three-position funded-aware non-delivery preview
2026-07-27	€ 99,756.76	€ 60,439.44	€ 39,317.32	Three-position funded-aware non-delivery preview
2026-08-10	€ 99,756.76	€ 50,208.40	€ 49,548.36	Candidate-only EU/UCITS valuation observation; not delivery authority

7 CONCLUSION

- Preserve the protected state (LOCK, VWCE, EUNA and SXR8) until current re-underwriting supports a separate allocation decision.
- Verified implementation lines: 0 verified S&P 500 UCITS trading lines.
- Use exact trading-line identity, current pricing, re-underwriting and separate allocation authority for every change.
- Use donor provenance to fail-close macro freshness.

2026-08-10

8 ALLOCATION MAP

Segment	Positioning	Explanation
Cash	Current 50.33% · no fixed cash floor	Cash is an active position. Above 3%, a fully fundable actionable opportunity requires an explicit deploy-or-explain review; above 5%, cash is material. These are review rules, not fixed cash targets.
Cybersecurity satellite	Current 10.26% · 934 shares	Current protected model position. Any add or reduction requires current re-underwriting evidence and a separate allocation decision.
Global core equity	Current 24.87% · 151 shares	Current protected model position. Any add or reduction requires current re-underwriting evidence and a separate allocation decision.
Stabilising aggregate bonds	Current 7.48% · 1526 shares	Current protected model position. Any add or reduction requires current re-underwriting evidence and a separate allocation decision.
U.S. equity overweight	Current 7.06% · 10 shares	Current protected model position. Any add or reduction requires current re-underwriting evidence and a separate allocation decision.

9 SECOND-ORDER EFFECTS

Driver	First order	Second order	ETF EU implication
4 funded model positions	The protected model portfolio contains LOCK, VWCE, EUNA and SXR8.	Every position must re-earn capital each run through fresh-cash and implementation re-underwriting.	A historical purchase or target weight creates no current Hold, Add or Reduce authority.
VWCE plus direct SXR8 overweight	Broad global exposure already contains U.S. mega-cap exposure alongside the direct SXR8 position.	Ticker diversification can therefore contain more factor overlap than the position count suggests.	Measure factor overlap before further deployment; the donor 40% rule is a concentration warning, not a position cap.
EUNA as bond stabiliser	The EUR-hedged aggregate-bond position can add duration diversification.	Ballast behaviour is empirical and not guaranteed.	Hedge/ballast validity must be explicitly re-underwritten.
LOCK cybersecurity satellite	The portfolio has an explicit cybersecurity satellite alongside core exposures.	Satellite contribution and overlap must be measured separately from the structural cybersecurity thesis.	A valid thesis does not automatically justify the current instrument or weight.

10 UCITS CANDIDATES AND PRICING EVIDENCE

Pricing evidence supports current model valuation and comparison; it never creates funding or broker authority on its own.

13 REPLACEMENT, ROTATION AND AVOIDANCE RADAR

Avoid / monitor	Reason
Inverse or leveraged products	Outside the current product policy.
Unverified trading lines	No allocation before identity, KID, exact trading line, current pricing, fundability and a separate allocation decision are confirmed.
Gold ETCs	Blocked under the current UCITS-only policy.

Avoid / monitor	Reason
Narrow technology concentration	Assess only as satellite exposure.

14 INPUT FOR THE NEXT RUN

- Portfolio state: output/etf_eu_portfolio_state.json
- Valuation history: output/etf_eu_valuation_history.csv
- Pricing artifact: /tmp/etf_eu_pricing_v2_ytcrlv9_/pricing_v2_layout_compat.json
- Priority candidates: LOCK, VWCE, EUNA, SXR8, CSPX, IWDA, EUNL

1. re-underwrite every funded position (LOCK, VWCE, EUNA, SXR8) from current evidence rather than historical target metadata
2. obtain fresh exact-line completed closes before any add, reduction or new position
3. run direct replacement duels for any replaceable or weakening holding
4. classify material cash and apply deploy-or-explain only when a fully fundable actionable lane exists

15 DISCLAIMER

This report is for informational and educational purposes only and is not investment, legal, tax or financial advice. It is not a recommendation to buy, sell or hold securities. Investing involves risk, including loss of principal. U.S. ETF symbols are research references only; EU product authority remains ISIN-first and UCITS-first.
