

WEEKLY ETF EU REVIEW

Investor report

2026-09-18

This report is for informational and educational purposes only. UCITS identity and current canonical pricing state are authoritative.

PRIMARY REGIME

Rate-hike repricing

PORTFOLIO ACTION

6 model positions active

MAIN CONCLUSION

Protected model portfolio: LOCK, DFEN, VWCE, EUNA, SXR8 and IQQQ; every change requires current re-underwriting and a separate allocation decision.

1 DECISION COCKPIT

- This run: no model-portfolio change is authorized; 6 protected model positions are active — LOCK, DFEN, VWCE, EUNA, SXR8 and IQQQ.
- Funded pricing authority: all 6 funded lines must carry exact-date canonical pricing authority; confidence is shown separately per line.
- Full pricing layer: 11 authorized lines, of which 9 independently verified and 2 without a current verifier.
- Pricing authority never independently creates funding, allocation, broker or delivery authority.

Decision rule: Change only from current re-underwriting, canonical exact-close pricing authority, fundability and a separate allocation decision.

2 PORTFOLIO AND CAPITAL

Component	Value
Starting capital	€ 100,000.00
Cash	€ 28,101.01
Invested market value	€ 70,649.20
Total portfolio value	€ 98,750.21
Return since inception	-1.25%
Funded positions	6

The model portfolio has € 70,649.20 invested and € 28,101.01 in cash; no real broker execution.

3 REGIME AND POLICY DASHBOARD

Macro pack is sufficiently current.

Component	Reading	Implication
Regime	Rate-hike repricing	Context, not allocation authority.
Federal Reserve	Restrictive / data-dependent	Maintain quality and cash discipline; any allocation still requires a verified UCITS instrument, current pricing, re-underwriting and a separate capital decision.
ECB	On hold after June tightening / data-dependent	European equity or bond exposure remains conditional on UCITS identity, exact-line verification, current pricing, re-underwriting and a separate capital decision.

4 STRUCTURAL UCITS OPPORTUNITY RADAR

Theme	UCITS lines	Research reference	Current status	Horizon
Core U.S. equity through UCITS	CSPX, SXR8	SPY · research only	Active model position: SXR8	3–12 months
Global equity	VWCE, IWDA	VT · research only	Active model position: VWCE	3–12 months
Emerging-market equity	EMIM	EEM · research only	Research / fundability not yet complete	6–18 months
Technology and semiconductors	CNDX	QQQ / SMH · research only	Research / fundability not yet complete	3–12 months
Global aggregate bonds	EUNA	AGG · research only	Active model position: EUNA	3–12 months
Infrastructure and electrification	INFR	PAVE / GRID · research only	Research / fundability not yet complete	6–18 months
Gold and hard assets	SGLN	GLD · research only	Research / fundability not yet complete	6–18 months

5 KEY RISKS AND INVALIDATIONS

- Same-date provider disagreement blocks valuation-grade pricing authority.
- 2 pricing rows lack canonical pricing authority and remain outside funding decisions.
- Factor overlap between VWCE and SXR8 must be treated as explicit concentration.
- Material cash remains deploy-or-explain: deploy only when a distinct lane is fully fundable.

6 PORTFOLIO DEVELOPMENT

Portfolio curve (EUR)

7 CONCLUSION

Preserve the protected model portfolio (L0CK, DFEN, VWCE, EUNA, SXR8 and IQQQ) under current re-underwriting. Use canonical pricing authority for valuation and treat independent verification only as confidence evidence.

WEEKLY ETF EU REVIEW

Analyst report

2026-09-18

8 ALLOCATION MAP

Segment	Role	Weight	Current decision
LOCK	Cybersecurity satellite	10.54%	hold
DFEN	Defense resilience satellite	10.95%	hold
VWCE	Global core equity	25.56%	hold
EUNA	Stabilising aggregate bonds	7.48%	hold
SXR8	U.S. equity overweight	7.26%	hold
IQQQ	Water infrastructure satellite	9.76%	hold
Cash	Tactical reserve	28.46%	Deploy-or-explain

9 SECOND-ORDER EFFECTS

Driver	First order	Second order	ETF EU implication
Cash-only starting position	No funded-position market drawdown.	Opportunity cost rises if verification takes too long.	Accelerate verification while retaining a separate allocation decision.
Two verified S&P 500 trading lines	Implementation risk falls for core exposure.	Choosing USD versus EUR trading lines affects broker access, currency and operational simplicity.	Compare broker availability and total execution cost before allocation.
Multiple lines per ISIN	Fund identity is clearer than ticker identity.	Selecting the wrong line can introduce liquidity, currency or pricing differences.	Remain ISIN-first and treat the trading line as an explicit decision variable.
Technology and semiconductor candidates	Higher structural growth exposure.	Greater factor concentration and volatility than broad core exposure.	Treat as satellite exposure, not an automatic core holding.

10 UCITS CANDIDATES AND PRICING EVIDENCE

Every pricing claim in this table is derived directly from canonical pricing state. Exact primary pricing can carry valuation authority; a verifier increases confidence and same-date disagreement blocks.

Trading line	Fund	ISIN	Exchange	Pricing date	Close	Currency	Pricing authority	Primary	Verifier	Role
XMLC	L&G Clean Water UCITS ETF USD Acc	IE00BK5BC891	Xetra	2026-09-18	17.82	EUR	Exact close · independently verified	alpha_vantage	yahoo_chart	Research only

12 CURRENT-POSITION REVIEW

Trading line	ISIN	Shares	Price	Pricing date	Market value	Weight	Pricing authority	Implementation	Next action
LOCK	IE00BG0J4C88	934	€ 11.14	2026-09-18	€ 10,404.76	10.54%	Exact close · independently verified	The verified iShares Digital Security Xetra UCITS implementation remains fit for the cybersecurity sleeve. Exact completed-close primary pricing is authorized by the canonical pricing state; independent same-date verification is present.	Hold current shares; no add while overall equity/technology factor exposure remains material.
DFEN	IE000YYE6WK5	207	€ 52.23	2026-09-18	€ 10,811.61	10.95%	Exact close · independently verified	The verified VanEck Defense Xetra UCITS implementation remains fit for the defense/resilience sleeve. Exact completed-close primary pricing is authorized by the canonical pricing state; independent same-date verification is present.	Hold the current position; fresh evidence does not justify adding or reducing this run.
VWCE	IE00BK5BQT80	151	€ 167.14	2026-09-18	€ 25,238.14	25.56%	Exact close · independently verified	Verified Xetra UCITS all-world implementation remains fit for the diversified core role. Exact completed-close primary pricing is authorized by the canonical pricing state; independent same-date verification is present.	Hold current shares; no add this run because current equity beta is already substantial and no stronger distinct core replacement is established by current evidence.
EUNA	IE00BDBRDM35	1,526	€ 4.84	2026-09-18	€ 7,382.48	7.48%	Exact close · independently verified	Verified EUR-hedged Xetra UCITS implementation remains fit for the stabilising role. Exact completed-close primary pricing is authorized by the canonical pricing state; independent same-date verification is present.	Hold current shares as modest ballast; no add in the present risk-on regime.
SXR8	IE00B5BMR087	1071	€ 71.73	2026-09-18	€ 7,173.40	7.26%	Exact close · independently verified	The mature S&P 500 Xetra UCITS implementation remains fit for the explicit U.S. overweight role. Exact completed-close primary pricing is authorized by the canonical pricing state; independent same-date verification is present.	Hold current shares; do not add because the overweight is already explicit and overlaps the global core.

Trading line	ISIN	Shares	Price	Pricing date	Market value	Weight	Pricing authority	Implementation	Next action
IQQQ	IE00B1TXK627	149	€ 64.69	2026-09-18	€ 9,638.81	9.76%	Exact close - independently verified	The verified iShares Global Water Xetra UCITS implementation remains fit for the water-infrastructure sleeve. Exact completed-close primary pricing is authorized by the canonical pricing state; independent same-date verification is present.	Hold current IQQQ; do not double-fund the same water exposure.

13 REPLACEMENT, ROTATION AND AVOIDANCE RADAR

Position	Replaceable	Best alternative	Duel status	Review trigger
LOCK	No	CIBR/BUG remain donor research references only; no superior exact EU replacement is currently established.	Current holding retained	Re-underwrite if cybersecurity relative strength rolls over materially or technology-factor concentration rises.
DFEN	No	PPA/ITA remain U.S. donor references; no equally mature exact EU replacement is currently established.	Current holding retained	Re-underwrite if defense relative strength deteriorates, policy support weakens, or factor overlap becomes excessive.
VWCE	No	IWDA remains an implementation comparator; any current replacement decision must be re-derived from the current fundability bridge.	Current holding retained pending a superior current-state replacement case	Re-underwrite if broad-equity regime weakens materially, implementation quality deteriorates or SXR8 overlap rises enough to impair diversification.
EUNA	No	No current alternative has established a stronger implementation case for the same EUR-hedged global aggregate role.	Role retained; no replacement trigger	Re-underwrite if bond ballast fails during equity stress, rate volatility materially worsens, or a better verified diversifier becomes available.
SXR8	No	CSPX shares the same fund exposure; any trading-line switch requires a superior current implementation case rather than historical provider-count claims.	Current Xetra line retained	Re-underwrite if U.S. leadership weakens versus global equities or if combined VWCE/SXR8 concentration becomes decision-relevant.
IQQQ	No	XMLC remains the first implementation comparator; any switch must be established from current identity, pricing authority, fundability and allocation evidence.	IQQQ retained pending a superior current implementation case	Continue IQQQ-vs-XMLC implementation duel; replace only if XMLC establishes a clear implementation advantage or water-lane thesis weakens.

14 INPUT FOR THE NEXT RUN

- Portfolio state: /tmp/etf_eu_pricing_v2_6m2g926x/derived_report_portfolio.json
- Valuation history: output/etf_eu_valuation_history.csv
- Pricing artifact: /tmp/etf_eu_pricing_v2_6m2g926x/pricing_v2_layout_compat.json
- Priority candidates: LOCK, DFEN, VWCE, EUNA, SXR8, IQQQ, CSPX, IWDA, EUNL

1. re-underwrite every funded position (LOCK, DFEN, VWCE, EUNA, SXR8, IQQQ) from current evidence rather than historical target metadata
2. obtain fresh exact-line completed closes before any add, reduction or new position
3. run direct replacement duels for any replaceable or weakening holding
4. classify material cash and deploy only when a distinct lane is fully fundable and separately approved
