

2026-07-17

This report is for informational and educational purposes only. UCITS identity, trading line and product policy remain authoritative; see the disclaimer at the end.

PRIMARY REGIME

Risk-on growth

PORTFOLIO ACTION

3 model positions active

MAIN CONCLUSION

Active model portfolio: 151 VWCE, 1,526 EUNA and 10 SXR8; remaining target capacity stays in cash.

1 DECISION COCKPIT

- This week: first tranches added in 151 VWCE and 1,526 EUNA; SXR8 maintained.
- Most mature implementation: 4 verified UCITS trading lines.
- Main blocker: 6 lines are not yet fully verified or priced.
- Next action: monitor role, contribution and overlap; change nothing without fresh pricing and a separate allocation decision.

Decision rule: Maintain VWCE, EUNA and SXR8; keep remaining capacity in cash and review every change separately.

2 PORTFOLIO AND CAPITAL

Component	Value
Starting capital	€ 100,000.00
Cash	€ 60,439.44
Invested market value	€ 39,577.16
Total portfolio value	€ 100,016.60
Return since inception	0.02%
Funded positions	3

The model portfolio now has € 39,577.16 invested and € 60,439.44 in cash. No real brokerage order was placed.

3 REGIME AND POLICY DASHBOARD

Macro pack is sufficiently current.

Component	Reading	Implication
Regime	Risk-on growth	Descriptive macro context; no allocation authority.
Federal Reserve	Restrictive / data-dependent	Maintain quality and cash discipline; any allocation still requires a verified UCITS instrument, current pricing and a separate capital decision.
ECB	Tightening / inflation-sensitive	European equity or bond exposure remains conditional on UCITS identity, trading-line verification, current pricing and relative-strength confirmation.

- The model portfolio now holds VWCE, EUNA and SXR8; review shifts from activation to contribution and overlap.
- AI and semiconductor leadership keeps the satellite watchlist relevant, but concentration risk still blocks automatic funding.

4 STRUCTURAL UCITS OPPORTUNITY RADAR

Scores show relevance and implementation maturity, not allocation authority.

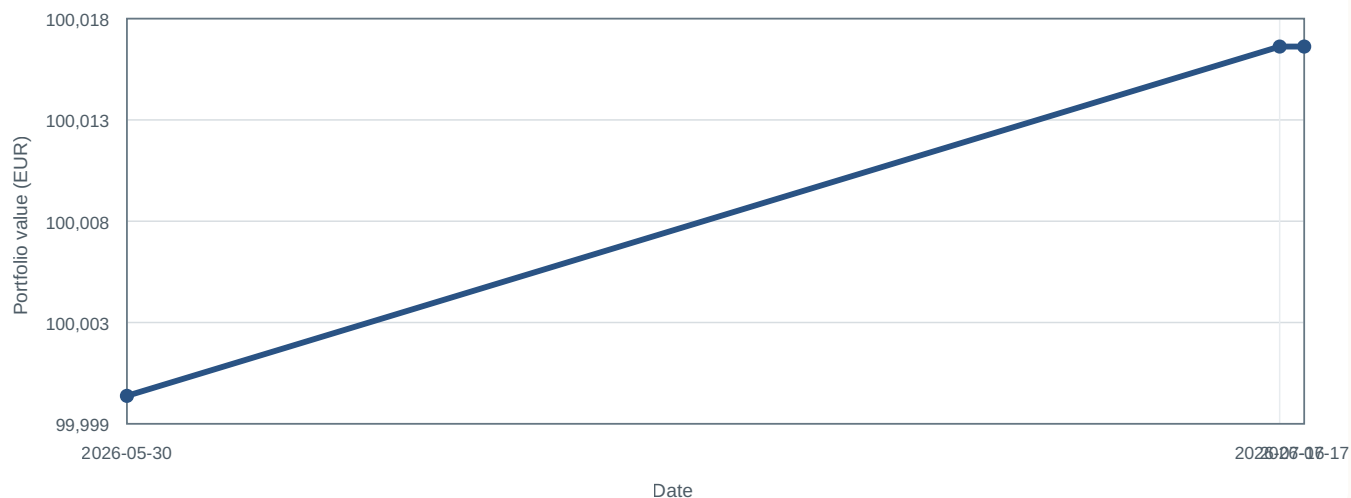

Theme	UCITS lines	Reference	Relevance	S	I	Status	Next confirmation	Horizon
Core U.S. equity through UCITS	CSPX, SXR8	SPY · research only	Broad U.S. earnings exposure and liquidity make this the most mature implementation lane.	5	5	Funded model position active	Monitor role, contribution and overlap; do not add without a fresh completed close, concentration review and a separate allocation decision.	3–12 months
Global equity	VWCE, EUNL, IWDA	VT · research only	Broad global diversification reduces dependence on one region or factor.	4	5	Funded model position active	Monitor role, contribution and overlap; do not add without a fresh completed close, concentration review and a separate allocation decision.	3–12 months
Emerging-market equity	EMIM	EEM · research only	Additional growth and valuation diversification, with higher currency and policy risk.	3	3	Watchlist, verification required	Complete identity, KID, trading-line and source-agreement checks.	6–18 months
Technology and semiconductors	SMH, CNDX, SXRV	QQQ / SMH · research only	AI infrastructure and compute remain structural growth drivers, but concentration risk is high.	5	3	Watchlist, verification required	Complete identity, KID, trading-line and source-agreement checks.	3–12 months
Global aggregate bonds	EUNA	AGG · research only	May later add stability and duration diversification once trading lines and pricing are confirmed.	3	5	Funded model position active	Monitor role, contribution and overlap; do not add without a fresh completed close, concentration review and a separate allocation decision.	3–12 months
Infrastructure and electrification	INFR	PAVE / GRID · research only	Grid investment, data centres and electrification support the structural case.	4	1	Research only, not priced	Complete registry and pricing coverage before comparison is decision-useful.	6–18 months
Gold and hard assets	SGLN	GLD · research only	Diversification potential exists, but the European ETC structure requires an explicit policy decision.	2	1	Policy blocked	Decide explicitly whether ETC structures are permitted by product policy.	6–18 months

5 KEY RISKS AND INVALIDATIONS

Active risk	Resolution / invalidation
Price observations are not yet valuation-grade.	Promote only after source agreement and pricing lineage are sufficiently strong.
6 trading lines still require full verification.	No funding before identity, KID, exact trading line, current pricing and a separate allocation decision are confirmed.
0 line has no usable price in this run.	Keep unresolved lines outside comparison and allocation.
Technology candidates may create overly narrow factor exposure.	Cap satellite weight and always compare with broad core exposure.
Gold exposure often uses ETC structures outside the current policy.	No inclusion without an explicit product-policy decision.

6 PORTFOLIO DEVELOPMENT

Portfolio curve (EUR)

Date	Portfolio value	Cash	Invested	Comment
2026-05-30	€ 100,000.00	€ 100,000.00	€ 0.00	Initial cash-only EU/UCITS bootstrap state
2026-07-16	€ 100,016.60	€ 60,439.44	€ 39,577.16	Three-position funded-aware non-delivery preview
2026-07-17	€ 100,016.60	€ 60,439.44	€ 39,577.16	Three-position funded-aware non-delivery preview

7 CONCLUSION

- Maintain all three funded positions; remaining target capacity stays in cash until a separate decision authorises change.
- Best-supported implementation: 4 verified S&P 500 UCITS trading lines.
- Review VWCE, EUNA and SXR8 by role, contribution and overlap before further deployment.
- Use current macro and pricing inputs for every portfolio change.

2026-07-17

8 ALLOCATION MAP

Segment	Positioning	Explanation
Cash	Current 60.43% · reserve at least 7.50%	Remaining target capacity stays in cash and is not automatically redistributed to other themes.
Global equity core	Active 24.96% · strategic target 50.00%	151 shares of VWCE are active; additional deployment requires a new separate allocation decision.
U.S. equity overweight	Active 7.12% · strategic target 15.00%	10 shares of SXR8 are active; a second tranche is not authorised.
Global aggregate-bond stabiliser	Active 7.50% · strategic target 15.00%	1,526 shares of EUNA are active; additional deployment requires a new separate allocation decision.
Satellites	Not funded	SXRV and semiconductor exposure require exact-line identity, fresh pricing, concentration review and a separate decision.
Gold / hard assets	Policy blocked	The ETC structure remains outside the current UCITS-only policy.

9 SECOND-ORDER EFFECTS

Driver	First order	Second order	ETF EU implication
Three funded model positions	VWCE, EUNA and SXR8 combine global equity, aggregate bonds and a direct U.S. overweight.	Return, stabilisation and overlap are now separately observable.	Review every position by role and contribution; change nothing without a separate decision.
VWCE plus direct SXR8 overweight	The portfolio combines broad global coverage with additional U.S. exposure.	Effective U.S. exposure is higher than the standalone SXR8 weight suggests.	Measure overlap before a second SXR8 tranche or further global-equity deployment.
EUNA as bond stabiliser	The EUR-hedged aggregate-bond position adds duration diversification.	Its stabilising effect may weaken during simultaneous rate and equity stress.	Monitor contribution and correlation; do not treat EUNA as guaranteed protection.
Technology and semiconductor candidates	Higher structural growth exposure.	Greater factor concentration and volatility than broad core exposure.	Treat as satellite exposure and require a separate allocation decision.

10 UCITS CANDIDATES AND PRICING EVIDENCE

Market observations support only the transparent model portfolio; they are not a real brokerage execution.

Line	Fund	ISIN	Exchange	Date	Close	Currency	Status	Reference

12 CURRENT-POSITION REVIEW

Funded ISIN identities: VWCE — IE00BK5BQT80 · EUNA — IE00BDBRDM35 · SXR8 — IE00B5BMR087

The funded positions exist only in the repository model portfolio. Remaining target capacity stays in cash until a separate decision authorises change.

Line	Fund	ISIN	Shares	Price	Date	Market value	Weight	Phase target	Status
VWCE	Vanguard FTSE All-World UCITS ETF USD Acc	IE00BK5BQT80	151	€ 165.32	2026-07-16	€ 24,963.32	24.96 %	25.00%	Model position · no brokerage order
EUNA	iShares Core Global Aggregate Bond UCITS ETF EUR Hedged Acc	IE00BDBRDM35	1,526	€ 4.91	2026-07-14	€ 7,497.24	7.50%	7.50%	Model position · no brokerage order
SXR8	iShares Core S&P 500 UCITS ETF USD (Acc)	IE00B5BMR087	10	€ 711.66	2026-07-16	€ 7,116.60	7.12%	7.50%	Model position · no brokerage order

13 REPLACEMENT, ROTATION AND AVOIDANCE RADAR

Avoid / monitor	Reason
Inverse or leveraged products	Outside the current product policy.
Unverified trading lines	No allocation before identity, KID, exact trading line, current pricing and a separate decision are confirmed.
Gold ETCs	Blocked under the current UCITS-only policy.
Narrow technology concentration	Assess only as satellite exposure.

14 INPUT FOR THE NEXT RUN

- Portfolio state: output/etf_eu_portfolio_state.json
- Valuation history: output/etf_eu_valuation_history.csv
- Pricing artifact: output/pricing/ucits_close_price_validation_basket_results_20260717_114500.json
- Priority candidates: VWCE, EUNA, SXR8, SXRV, SMH

1. monitor VWCE, EUNA and SXR8 against role, contribution, overlap and invalidation conditions
2. obtain fresh exact-line completed closes before any add, reduction or new position
3. review global-equity overlap between VWCE and the direct SXR8 overweight
4. keep satellite and later-tranche capacity in cash unless a separate validated allocation decision authorises change

15 DISCLAIMER

This report is for informational and educational purposes only and is not investment, legal, tax or financial advice. It is not a recommendation to buy, sell or hold securities. Investing involves risk, including loss of principal. U.S. ETF symbols are research references only; EU product authority remains ISIN-first and UCITS-first.
